

Perfect For...

Building Extensions

Garden Sheds

Verandas

Dormers

Garages

Trailers

Carports

Gutters

INTRODUCTION

The Firestone RubberCover System is based on EPDM roofing membranes that are made of a synthetic rubber compound. For more than 25 years Firestone EPDM membranes have been installed on commercial and industrial low slope roofs worldwide offering proven field performance. Today these proven membranes are also available for residential roofing applications. This means you can choose the Firestone RubberCover system safe in the knowledge that a vast amount of industrial experience and knowledge guarantees long lasting, quality performance.

A MULTITUDE OF USES

Given the extensive industrial experience and the resultant development of the product, Firestone RubberCover is an ideal, high performance system for a variety of flat roofing applications around your home:

- Building Extensions
- Garden Sheds
- Verandas
- Dormers
- Garages
- Trailers
- Carports
- Gutters

SPECIAL FEATURES & BENEFITS

- Large seamless single-ply sheets
- Flame free application
- Easy to install without special tools
- Little or no maintenance
- Life expectancy up to 50 years
- Lightweight
- Highly flexible
- Eco friendly

THE FINISHING TOUCH

The Quicktrim system has been designed especially for single-ply flat roof membranes to compliment UPVC fascias and guttering fixed on domestic properties.

It is the finished edge which is seen from ground level so its important it looks neat and blends with the existing roofline.

It has also been designed with the installer in mind, all the component parts are fitted with ease and with the option of using longer lengths and fewer joints, so fitting time is reduced considerably.

MANUFACTURING PROCESS

Both the fascia edge and gutter edge are extruded using virgin plastic ensuring colour fast, non brittle, identical profiles.

Corner pieces and blank ends are injection moulded using state of the art manufacturing technology.

The manufacturing process is BSI quality assured accredited to 99.99% accuracy

UNIQUE DESIGN

A built in watercheck kerb on the fascia edge trim assures the rainwater is diverted towards the gutter edge.

The specially formulated Quicktrim 'Bond and Seal' sealant or a closed cell foam tape is used between trim and membrane to provide a seal and polypop pins are used to mechanically fix from the outside vertical edge ensuring the membrane is not penetrated.

Along the gutter edge the membrane is sandwiched between a pre-installed backplate and a front cover clip ensuring a 100% water tight seal with no penetrations.

Classic Windows and Conservatories have achieved the following standards.

Licence No. KM505515

All Products manufactured to the following standards.

BS7950-7412
